Accrual Processing Codes

As accrual data are uploaded into and processed by the UKCRN system they pass through a number of stages. The progress of an upload through these stages is indicated by status codes which are recorded as the data moves through the system.

Status	Explanation
Started	The upload process has begun
Upload Fail	The file could not be uploaded to the system
Preload Fail	The file was successfully uploaded onto the server but was either formatted incorrectly, or another problem occurred. An error message will have been displayed to the user
Preload Success	The file was successfully uploaded onto the server and was formatted correctly.
MainLoad fail	There were problems in the data which prevented it from being loaded into the database for processing
MainLoad success	The data have been loaded into the database for processing
UserCheck aborted	On checking the sample data displayed to the user prior to validation, the user cancelled the upload
UserCheck passed	The user initiated the validation of their data
Validated With Errors	Errors were found in the data, upload the upload was stopped. The errors will have been displayed to the user.
Validated With Warnings	Warnings were generated from data, the upload was stopped by the user. The warnings will have been displayed to the user.
Validated Successfully	The data validated successfully
Upload Complete Requires Mapping	The validated data are awaiting mapping by UKCRN
Upload Complete Fully Mapped	The validated data have been mapped and are awaiting release onto the live system.
Part-released data	Mapping has been completed. The data have been partly released to the live system but there are some outstanding issues to be resolved regarding changes to the data which need to be resolved before the full data set can go live.
Data Published	The data have been published to the live system
